

Stainless Trolleys - Wheel Maintenance

Please see information below on correction of trolley wheels. This is applicable where you find one wheel not touching the ground and the trolley rocks a little.

Instructions

If wheel number **1** is not on the ground, lift the trolley and hit the ground heavily with wheel number **2** or **4**. Then the wheels will be reset to horizontal.

It is important you only hit the ground with wheel **2** or **4**.

Please contact Pacific Medical should you have any questions or your issues persist.
